

Hardware Order Guide

EMW offers fully customizable hardware tailored to your needs for form and function. This guide streamlines the design process to provide a fun and interactive way to come up with your ideal hardware. While this guide offers hundreds of combinations, EMW can create just about any custom hardware you can dream up. This guide is just the beginning of the possibilities for your unique, hand forged hardware from EMW.

There are 5 metrics to consider when designing your hardware:

1. **Style:**

This is the base style or shape of the pull or knob. While the next 3 metrics can drastically change the overall look of your hardware, style will be the governing factor and is the perfect place to start.

2. **Texture:**

Once a style is determined, you'll want to consider what kind of texture (if any) you want forged into the material. Texture can add a more rustic, industrial, or modern feel to the hardware you choose.

3. **Material Size & Shape:**

Material is an important factor that can dial a look up or down for the desired effect. Thick, and shorter sizes tend to move toward a more rustic or industrial look, while thinner, longer material lends itself to a more elegant, refined or modern appeal. Material shape is secondarily important, but can further refine your look. Round material tends to "soften", while square "cleans" the design.

4. **Finish:**

Finish is a hugely important factor and we pride ourselves in providing the most superbly unique, hand worked finishes that you won't find anywhere else. From Oil blackening to Brass brushing, our finishes are of the highest quality and are made to last lifetimes. (Custom finishes and matching available.)

5. **Accents:**

Accents such as decorative screws and back plates can add the finishing touch to your overall look.

Style Options

<p>U Pull Our best selling style. Functional, and adaptable to any decor. Standard material thicknesses are $\frac{3}{8}$, $\frac{1}{2}$, and $\frac{1}{4} \times 1$. Drilled and tapped to receive 8-32 screws which are mounted from the inside of the cabinet for a clean look.</p>	
<p>Rustic Pull Our first design and a timeless classic. A subtle yet ultra unique pull that treads the line between rustic and modern.</p>	
<p>Spike Pull A statement piece. Full of character as each spike has unique markings and pitting, as these are made from real reclaimed railroad spikes. A piece of functional history.</p>	
<p>Diamond Pull Modern elegance. A play on our rustic pull, however square material is turned so the edge is facing upward, and texture is typically smooth, resulting in a classy, yet in touch vibe.</p>	
<p>Modern Pull Sleek, minimalist style describes this pull best. Clean lines and a geometric feel, these go great in artistic spaces, lofts, and with modern style decor.</p>	
<p>Farmhouse Pull Utilitarian and industrial styles have this pull in mind. Functional, and full of unique, simple beauty.</p>	

<p>ST Knob Our best selling knob. Available in 1-1.25" standard sizes, but can be forged up to 2" for a real statement. Goes well with U or Rustic Pulls.</p>	
<p>L Knob A play on our U pulls, think of these as a knob version. Can be mounted in a number of orientations.</p>	
<p>Spike Knob A statement piece. Full of character as each spike has unique markings and pitting, as these are made from real reclaimed railroad spikes. A piece of functional history.</p>	
<p>Farmhouse Half Pull The bite sized version of the farmhouse pull, this version has a more modern feel. Very functional and understated.</p>	
<p>Finger Pull (Front Mount) Industrial, rustic and statement pieces, these finger pulls can be made in 1" to 4" lengths, and are about 3" in height. Can be mounted vertically or horizontally.</p>	
<p>Finger Pull (Rear Mount) These finger pulls are a sleek way to open a cabinet. Mounted from the rear, only the lip is visible. Requires a 3/16" gap between cabinet doors vertically.</p>	

Texture Options

Hammered
Rustic yet refined. Adds a warm, eclectic touch to modern decor, or accentuates rustic and craftsman decor.

Moonscape
The most abstract and unique of our standard textures. Cratered impressions resembling the lunar surface. Lends itself to modern, abstract, and nouveau.

Smooth
Classic, modern, clean. This look leans modern and industrial.

Twist
Can be added to any style pull. Multiple styles of twists are available. (single, reverse, double, water, pineapple).

Tree bark
This deep texture makes a strong statement. Natural, flowing lines, lending itself to boho style decor.

Material Size & Shape Options

Thickness	Length (typical/varies by style)	Shape
1/4"	3-4"	Round
3/8"	4-12"	Square
1/2"	13-24"	1/4 X 1" Flat
5/8"	25+"	

Finish Options

<p>Oil Blackened</p> <p>This satin black finish has touches of grey, and allows the texture and forge work in the steel to come through. Our black oxide process penetrates into the metal and provides one of the most durable finishes out there. This finish also offers a much more complex and unique finish compared to paint, which will wear and chip over time and covers the hand forged look of the piece.</p>	
<p>Brushed Steel</p> <p>This is a satin finish that goes well with both modern and rustic decor. It is not a high shine, factory gloss kind of look. Some forge scale will be present. While it does have a slight shine, it is not polished steel. It is however wonderfully unique, and offers a truly handmade feel that you can't find with mass produced items.</p>	
<p>Brass Brushed</p> <p>This finish is achieved by heating the steel and brushing using a real brass bristle brush. The brass integrates with the steel creating a very durable and amazingly beautiful gold brushed look.</p>	

All finishes are sealed with a premium quality, moisture wicking, hardening wax that can be reapplied easily for a finish that lasts decades. Paint and synthetic sealants will chip or peel over time and require full removal and refinishing which can be costly and time consuming.

Accents

<p>Decorative Screws Pyramid or acorn style screws are an additional cost. Round head screws are provided with the purchase of your hardware.</p>	
<p>Back Plates Standard 1.5" back plates for each foot, or full back plates are available.</p>
